38. Agile Board Setup

Tool: Jira (Company-managed project with Scrum template)

Project Configuration:

- **Project Name:** ERP System Implementation
- **Project Key:** ERP
- **Board Type:** Scrum (2-week sprints with sprint planning, review, and retrospective)

Columns Configuration:

Column	Statuses	WIP Limit	Purpose
Backlog	Backlog, Discovery	Unlimited	Unrefined ideas, epics, and stories awaiting grooming
Refinement	Ready for Refinement, Needs Clarification	10	Stories requiring technical analysis or business clarification
Ready for Development	Ready, Estimated, Approved	15	Fully groomed stories with acceptance criteria and estimates
In Progress	In Development, In Progress	3 per assignee	Active development work
Code Review	PR Created, Under Review	5	Pull requests awaiting peer review
QA	In Testing, Regression	5	Stories deployed to staging for quality assurance
UAT	Client Review, PO Review	8	Product Owner and stakeholder validation
Blocked	Blocked, Awaiting Dependency	5	Work halted due to dependencies or impediments
Done	Done, Closed	Unlimited	Completed and accepted work

Automation Rules:

- Auto-transition to "Code Review" when PR is created
- Auto-assign to developer when status changes to "In Progress"
- Notify PO when status changes to "UAT"
- Auto-close linked issues when parent story is marked Done

39. Swimlanes Configuration

Configuration Type: Jira "Swimlanes based on Queries" for optimal visibility

Swimlane 1: Expedite Lane (Critical Path & Blockers)

text

Priority IN (Highest, Critical)

OR Labels IN (expedite, blocker, security, compliance)

OR Status = Blocked

- *Purpose:* Immediate visibility of production-critical issues and security vulnerabilities
- *Color:* Red highlight
- *SLAs:* Response time < 2 hours, Resolution < 24 hours

Swimlane 2: Epics (Workstreams)

text

Epic Link = "ERP-FIN" (Finance)

Epic Link = "ERP-HCM" (Human Capital)

Epic Link = "ERP-SCM" (Supply Chain)

Epic Link = "ERP-CRM" (Sales & CRM)

Epic Link = "ERP-FOUNDATION" (Platform & Integrations)

- *Purpose:* Visual separation of major functional workstreams
- *Benefit:* Prevents context switching and highlights work distribution

Swimlane 3: Technical Health

text

Issue Type IN (Task, Tech-Debt, Bug)

AND Labels IN (refactor, performance, security-patch, documentation)

- *Purpose:* Ensure non-functional work remains visible and not deprioritized

- *Target:* 15-20% of sprint capacity allocated here

Swimlane 4: Unassigned / New

text

Assignee = EMPTY

AND Status NOT IN (Done, Backlog)

- *Purpose:* Highlight unowned work requiring assignment

Default Swimlane: All other issues

40. User Story Creation (15 Stories using INVEST)

Here are 15 user stories structured with the **INVEST** principle, including enhanced acceptance criteria and business value statements.

Finance & Accounting Module

Story F-101: Three-Way Invoice Matching

As an Accounts Payable Specialist,
I want to automatically match vendor invoices against purchase orders and goods receipt notes,
So that I can approve payments only for accurately received items and prevent duplicate or fraudulent payments.

Acceptance Criteria (Gherkin):

text

Given a vendor invoice is uploaded

When the system performs 3-way matching

Then the invoice status is:

- "Matched" if PO exists, GRN exists, and quantity/price variance < 5%
- "Exception" if variance exceeds threshold, requiring manual review
- "Orphan" if no matching PO exists

And the system highlights line-level discrepancies with suggested resolution actions

Business Value: Reduce payment errors by 90%, prevent duplicate payments, shorten AP cycle from 15 days to 3 days

Story Points: 8

Story F-102: Period-End Closing Cockpit

As a Financial Controller,
I want to access a centralized dashboard showing the status of all period-end closing tasks,

So that I can track progress, identify bottlenecks, and ensure books close on time without missing critical steps.

Acceptance Criteria:

- Dashboard displays all mandatory closing activities (bank reconciliation, depreciation run, inter-company settlements, tax calculations)
- Each task shows status: Not Started / In Progress / Completed / Skipped with reason
- Red flag alerts for overdue tasks with escalation notifications
- One-click validation to ensure no transactions posted to closed periods
- Audit log captures who completed each task and timestamp

Business Value: Reduce month-end close from 10 days to 3 days; eliminate spreadsheet-based tracking

Story Points: 5

Story F-103: Multi-Currency Transaction Processing

As a Accounts Receivable Specialist,
I want to record customer payments in any currency and automatically calculate realized gains/losses,
So that I can manage global customers without manual currency conversion errors.

Acceptance Criteria:

- System supports 50+ currencies with real-time exchange rate fetching from central bank API
- Automatic calculation of exchange rate differences against invoice booking rate
- Separate reporting of realized vs unrealized gains/losses per GAAP/IFRS
- Multi-currency bank reconciliation with bank statement import

Business Value: Enable international expansion; automate complex accounting entries

Story Points: 8

Human Capital Management Module

Story HCM-201: Dynamic Leave Approval Workflow

As a HR Operations Manager,
I want to configure leave approval workflows with conditional routing based on department, leave type, and employee seniority,
So that we enforce organizational hierarchy and policy compliance without custom code.

Acceptance Criteria:

- No-code workflow builder with drag-and-drop interface
- Support for parallel approvals (e.g., HR + Department Head)
- Escalation rules if approver does not act within 48 hours
- Mobile notifications for approvers
- Leave balance auto-updates only after final approval
- Support for half-day and hourly leave entries

Business Value: Reduce HR administrative overhead by 70%; ensure policy compliance

Story Points: 8

Story HCM-202: Employee Onboarding Portal

As a New Hire,
I want to complete all onboarding paperwork, upload documents, and access training materials through a self-service portal before my first day,
So that I arrive prepared and productive from day one.

Acceptance Criteria:

- Pre-boarding starts 14 days before start date via automated email invitation
- Digital forms: tax withholding, direct deposit, emergency contacts, policy acknowledgments
- Document upload with automatic OCR verification (visa, ID, degree certificates)
- Equipment ordering integration with IT asset management
- Buddy assignment and welcome message from manager

- Dashboard showing onboarding completion percentage

Business Value: Reduce time-to-productivity by 50%; enhance new hire experience

Story Points: 5

Story HCM-203: Talent Review & Succession Planning

As a HR Business Partner,
I want to create 9-box grid assessments for employees and identify succession candidates for key roles,
So that we can proactively develop talent and mitigate key-person risk.

Acceptance Criteria:

- 9-box grid visualization (Performance vs. Potential)
- Calibration session support with manager comparisons
- Successor identification with readiness levels (Ready Now / 1-2 Years / 3+ Years)
- Development plan assignment with tracking
- Org chart view showing succession pipelines

Business Value: Reduce leadership vacancy time by 40%; improve retention of high-potential employees

Story Points: 8

Supply Chain & Inventory Module

Story SCM-301: Mobile-Optimized Warehouse Picking

As a Warehouse Picker,
I want to use a mobile device with barcode scanning to receive pick instructions and confirm picks,
So that I can pick orders efficiently with 99.9% accuracy and without paper lists.

Acceptance Criteria:

- Mobile app works offline with sync capability for warehouse connectivity gaps
- Optimized pick routes based on warehouse zone layout (wave picking)

- Barcode scanning validates correct item and location before confirmation
- Voice-assisted picking option for hands-free operation
- Real-time productivity metrics: picks per hour, accuracy rate
- Integration with warehouse map for new pickers

Business Value: Increase picking productivity by 35%; reduce shipping errors by 80%

Story Points: 8

Story SCM-302: Dynamic Reorder Point Calculation

As a Inventory Planner,
I want to configure automated reorder point calculations that consider lead time variability, demand forecasting, and safety stock formulas,
So that I maintain optimal inventory levels and prevent stockouts without overstocking.

Acceptance Criteria:

- Reorder point = (Average Daily Demand × Lead Time) + Safety Stock
- Safety stock configurable by formula: fixed, percentage of demand, or statistical (standard deviation-based)
- Seasonal demand patterns adjustable by product category
- Manual override capability with approval workflow
- Automated purchase order generation when reorder threshold triggered
- Dashboard showing items below reorder point with projected stockout dates

Business Value: Reduce inventory carrying cost by 20%; eliminate stockouts for top 100 SKUs

Story Points: 5

Story SCM-303: Lot Traceability & Recall Management

As a Quality Assurance Manager,
I want to track items by lot/batch number throughout the supply chain from supplier receipt to customer shipment,
So that I can execute precise recalls within minutes if quality issues arise.

Acceptance Criteria:

- Unique lot numbers with expiry dates mandatory for regulated items
- Complete traceability showing: supplier lot receipt → internal movements → finished goods → customer shipment
- One-click recall initiation with affected customer and shipment identification
- Recall notification templates with regulatory compliance
- Quarantine functionality for suspect lots
- Recall effectiveness tracking and closure workflow

Business Value: Reduce recall execution time from days to minutes; ensure regulatory compliance

Story Points: 13

CRM & Sales Module

Story CRM-401: Unified Customer 360° View

As a Account Manager,
I want to see all customer interactions (quotes, orders, support tickets, payments, communications) on a single timeline,
So that I can have informed conversations without switching between systems.

Acceptance Criteria:

- Timeline aggregates data from: ERP transactions, email integration, support system, meeting notes
- Filterable by interaction type and date range
- Key metrics widget: lifetime value, payment history, open orders, aging receivables
- Notes and follow-up tasks linked to customer record
- Single sign-on integration with Gmail/Outlook for email tracking
- Mobile-optimized view for field sales

Business Value: Increase cross-selling opportunities by 25%; improve customer satisfaction scores

Story Points: 8

Story CRM-402: Configurable Product Catalog for Quotes

As a Sales Engineer,
I want to build complex quotes using a configurable product catalog with dynamic pricing rules, volume discounts, and bundled offerings,
So that I can provide accurate proposals to enterprise customers without pricing errors.

Acceptance Criteria:

- Product catalog supports: base products, options, add-ons, and exclusion rules
- Pricing engine handles: tiered discounts, contract pricing, promotional offers
- Quote-to-order conversion with one click
- Quote versioning and approval workflow for discounts exceeding authority limits
- eSignature integration for customer acceptance
- Competitor tracking and win/loss analysis

Business Value: Reduce quote turnaround time by 60%; improve margin accuracy

Story Points: 13

System Foundation & Cross-Cutting Module

Story PLAT-501: Granular Role-Based Access Control (RBAC)

As a System Administrator,
I want to define custom roles with field-level and record-level permissions using segregation of duties (SoD) rules,
So that we comply with audit requirements and prevent fraud risks.

Acceptance Criteria:

- Role definition with permissions at: module, screen, field, and record level
- Segregation of Duties matrix with conflict detection (e.g., same user cannot create vendors and approve payments)

- Role assignment with start/end dates for temporary access
- Access review campaign module for periodic recertification
- Audit log of all permission changes and user access history
- Support for LDAP/Active Directory synchronization

Business Value: Achieve SOC 2 compliance; prevent unauthorized access incidents

Story Points: 13

Story PLAT-502: Real-Time Dashboard & Analytics Engine

As a Business Analyst,
I want to create custom dashboards with real-time data from any module using drag-and-drop widgets,
So that I can provide actionable insights to leadership without relying on IT for every report.

Acceptance Criteria:

- 50+ pre-built report templates across all modules
- Custom report builder with SQL-free interface
- Real-time data refresh with caching options for performance
- Dashboard sharing with role-based view permissions
- Scheduled report delivery via email (PDF/Excel)
- Drill-down capability from summary to transaction-level detail
- Export to Excel with pivot table compatibility

Business Value: Reduce report development time by 90%; enable data-driven decision making

Story Points: 8

Story PLAT-503: REST API Gateway with Rate Limiting

As a Integration Developer,
I want to expose core business objects (customers, orders, products, invoices) via REST

APIs with comprehensive documentation and rate limiting,
So that external systems can integrate securely and reliably without overwhelming the platform.

Acceptance Criteria:

- RESTful endpoints for all major entities with CRUD operations
- OAuth 2.0 / API key authentication with scoped permissions
- Rate limiting configurable per API key (requests per minute)
- Swagger/OpenAPI 3.0 documentation auto-generated and interactive
- Webhook support for event-driven integrations (e.g., order.created, invoice.paid)
- Request/response logging for troubleshooting with retention policy
- API versioning strategy for backward compatibility

Business Value: Enable ecosystem integration; support 10+ third-party system connections

Story Points: 8

Quality & Non-Functional

Story NFR-601: System Performance SLA

As a End User,
I want to experience consistent system responsiveness with page loads under 2 seconds and transaction processing under 5 seconds,
So that my productivity is not impacted by system latency.

Acceptance Criteria:

- 95th percentile page load time < 2 seconds under 500 concurrent users
- 95th percentile transaction processing < 5 seconds (excluding batch operations)
- Load testing validated with 2x expected peak user concurrency
- Performance monitoring dashboard with alerting
- Degraded mode handling during peak loads

Business Value: Ensure user adoption; prevent productivity loss

Story Points: 5 (infrastructure/optimization)

41. Epic Creation (Enhanced)

Epic ID	Epic Name	Description	Business Goal	Success Metrics	Target Timeline
ERP-FIN	Financial Management & Accounting	Automate GL, AP, AR, fixed assets, inter-company, and financial reporting with multi-currency and multi-entity support	Reduce month-end close from 10 to 3 days; achieve 99.9% reconciliation accuracy	Close time reduced by 70%; audit findings reduced by 80%	Release 1.0 (4 months)
ERP-HCM	Human Capital Management	Centralize employee lifecycle: recruitment, onboarding, time tracking, payroll, performance, and succession	Reduce HR admin overhead by 60%; improve employee satisfaction by 25%	HR ticket volume reduced; time-to-hire reduced by 30%	Release 1.5 (3 months)
ERP-SCM	Supply Chain & Inventory Control	End-to-end supply chain: procurement, warehouse management, inventory optimization, and logistics	Reduce inventory carrying cost by 20%; eliminate stockouts for top SKUs	Inventory turnover ratio increase; perfect order rate > 95%	Release 1.0 (4 months)

ERP-CRM	Customer Relationship Management	Manage sales pipeline, customer master, service requests, and after-sales support	Increase lead conversion by 20%; improve customer retention	Win rate increase; customer churn reduction	Release 2.0 (3 months)
ERP-FOUNDATION	Platform Foundation & Integrations	Authentication, RBAC, reporting engine, API gateway, audit logging, and data migration tools			

42. Epic Breakdown (Enhanced Example)

Epic: ERP-SCM (Supply Chain & Inventory Control)

Component	User Stories	Story Points	Dependencies
Product Master	Create products with variants (size, color, configurable attributes)	5	Foundation module
	Bulk import products via Excel with validation	3	-
	Manage product categories, attributes, and cross-sell relationships	3	-
Procurement	Create purchase requisitions with approval workflow	5	Foundation: RBAC
	Convert requisitions to purchase orders	3	-
	Manage vendor master with performance scoring	5	-
	Send purchase orders via EDI/email/fax	3	Integration layer
Receiving	Mobile receiving with PO lookup and barcode scanning	5	Mobile framework
	Quality inspection with pass/fail/reject workflow	5	-
	Cross-dock functionality for high-volume items	3	Warehouse layout
Inventory	Real-time inventory balance with location tracking	8	Product master
	Cycle counting with scheduled counts and variance approval	5	-

	Inventory adjustments with reason codes and approval	3	-
	Inventory transfers between warehouses with in-transit tracking	5	Multi-warehouse setup
Warehouse	Zone and bin location setup with putaway rules	8	-
	Wave picking with pick list generation	8	Mobile app
	Packing with shipping label generation	5	Carrier integration
Reporting	Stock aging report (slow-moving, dead stock)	3	Reporting engine
	Inventory valuation report (FIFO, LIFO, weighted average)	5	Finance integration
	Reorder point exception report	3	-

43. Story Mapping Workshop (Detailed Plan)

Workshop Title: ERP Story Mapping - Order-to-Cash Process

Facilitation Details:

Aspect	Details
Duration	Full day (9:00 AM - 5:00 PM)
Attendees	Product Owner, Finance Director, Operations Manager, Sales VP, Lead Developer, UX Designer, QA Lead, Scrum Master
Materials	Large wall (30 ft), sticky notes (various colors), markers, camera, digital backup (Miro)

Workshop Agenda:

Time	Activity	Description
9:00-9:30	**Context Setting**	Present project vision, scope, and constraints. Define user personas: Maria (AP Clerk), David (Warehouse Supervisor), Sarah (Sales Manager)
9:30-10:30	**Backbone Creation**	Identify main user activities horizontally. Example for Order-to-Cash: *Quote → Order → Pick → Pack → Ship → Invoice → Collect*
10:30-12:00	**Story Generation**	Under each activity, write user stories. Use colored sticky notes: Functional, Technical, Integration
12:00-1:00	**Lunch**	-
1:00-2:30	**Alternative Flows & Edge Cases**	Add exception handling stories: order cancellations, returns, payment disputes, backorders
2:30-4:00	**MVP Slicing**	Draw horizontal line. Above line: MVP (must-have for go-live). Below line: Future releases. Use dot voting for prioritization
4:00-5:00	**Estimation & Sequencing**	High-level T-shirt sizing (S/M/L/XL) and identification of dependencies

Output:

- Physical story map photographed and digitized in Miro
- MVP scope document with 35-40 stories identified
- Dependency matrix between epics
- Initial release planning with 4 sprints for MVP

44. Story Map Structure Creation (MVP & Release Plan)

Release 1.0: "Core Operations" (Month 1-4)

Activity	MVP Stories	Description
User Access	Login, password reset, basic roles (Admin, User, Viewer)	Foundational security
Customer Master	Create customers, import legacy data, duplicate detection	Sales foundation
Product Master	Create products, categories, pricing	Inventory foundation
Order Management	Create orders, modify orders, order status tracking	Core transaction
Inventory	Receive inventory, adjust stock, view balances	Stock accuracy
Shipping	Create shipments, print packing slips, basic carrier integration	Fulfillment
Invoicing	Generate invoices, send via email, record payments	Cash flow
Reporting	Sales report, inventory valuation, accounts receivable	Visibility

- **Release 1.5: "Enhanced Operations" (Month 5-7)**

Activity	Stories
Procurement	Purchase orders, vendor management, receiving
Warehouse	Barcode scanning, bin locations, wave picking
Finance	Multi-currency, fixed assets, advanced reconciliation
CRM	Lead management, opportunity tracking, sales analytics

Release 2.0: "Intelligence & Scale" (Month 8-10)

Activity	Stories
Analytics	Custom dashboards, predictive forecasting, AI-driven insights
Advanced SCM	Demand planning, supplier portals, EDI
HCM	Full HR suite: recruiting, performance, payroll integration

API Ecosystem	Public API, webhooks, partner marketplace

45. Definition of Ready (DoR) Checklist (Enhanced)

A user story is **Ready** for sprint planning only when:

Business Readiness

- **User Story:** Complete "As a... I want... So that..." format with clear persona
- **Acceptance Criteria:** Written in Gherkin format (Given/When/Then) covering happy path, edge cases, and error conditions
- **Business Value:** Articulated with measurable outcome
- **PO Approval:** Product Owner has reviewed and approved

Technical Readiness

- **Estimation:** Story pointed by team (Fibonacci: 1,2,3,5,8,13) with consensus
- **Dependencies:** All external dependencies identified and resolved, or workaround documented
- **Technical Design:** Architecture approach documented for complex stories (>8 points)
- **Database Changes:** Schema changes reviewed by DBA (if applicable)
- **API Contracts:** API specifications defined and reviewed (if applicable)

UX Readiness

- **Mockups:** High-fidelity designs attached for UI stories
- **User Flows:** Interaction flows documented
- **Responsive Design:** Requirements for mobile/tablet defined
- **Accessibility:** WCAG 2.1 AA compliance requirements defined

Testing Readiness

- **Test Scenarios:** QA has identified test scenarios
- **Test Data:** Required test data identified or can be created

- **Environment:** Required environment configurations documented

Non-Functional Readiness

- **Performance:** Performance requirements defined (response time, throughput)
- **Security:** Security implications reviewed (data sensitivity, permissions)
- **Compliance:** Regulatory requirements identified (GDPR, SOX, etc.)

DoR Gatekeeper: Scrum Master ensures checklist is complete before story enters "Ready for Development"

46. Definition of Done (DoD) Checklist (Enhanced)

A user story is **Done** only when all the following are satisfied:

Development

- **Code Complete:** All code written, commented where necessary, and merged to main branch
- **Coding Standards:** Code adheres to team standards (linting, formatting, naming conventions)
- **Peer Review:** Code reviewed by at least one developer, with all comments addressed
- **Unit Tests:** Unit tests written and passing (minimum 80% coverage for new code)
- **Integration Tests:** Integration tests passing for API/database changes
- **No Technical Debt:** No TODO comments, no intentional technical debt without ticket

Quality Assurance

- **Functional Testing:** All acceptance criteria tested and passed in QA environment
- **Regression Testing:** No regression in existing functionality
- **Performance Testing:** Performance criteria validated (if applicable)
- **Security Testing:** Security scan passed with no critical/high findings
- **Browser Compatibility:** Tested on supported browsers (Chrome, Firefox, Edge)
- **Mobile Compatibility:** Tested on iOS and Android (if applicable)

Deployment & Operations

- **Deployment:** Deployed to production/staging as appropriate
- **Configuration:** Feature flags configured (if applicable)
- **Monitoring:** Logging and monitoring configured
- **Rollback Plan:** Documented and tested

Documentation

- **Technical Docs:** API documentation, architecture updates completed
- **User Documentation:** User guides updated (if customer-facing)
- **Runbooks:** Operational runbooks updated for support team

Acceptance

- **PO Sign-off:** Product Owner has reviewed and accepted in UAT environment
- **Stakeholder Validation:** Key stakeholder validated (if applicable)

DoD Gatekeeper: QA Lead ensures checklist is complete before story moves to "Done"

47. Backlog Prioritization (Enhanced with WSJF)

Prioritization Framework: Weighted Shortest Job First (WSJF) for initial ordering, refined with stakeholder input

WSJF Formula: (Business Value + Time Criticality + Risk Reduction) / Job Size

Rank	Story ID	Epic	Description	Time Criticality	Risk Reduced
1	PLAT-501	Foundation	RBAC	10	10
2	PLAT-502	Foundation	User authentication SSO	9	9
3	FIN-101	Finance	Chart of Accounts setup	8	8
4	SCM-301	SCM	Product master with SKUmanagement	7	7
5	FIN-102	Finance	Journal entry & GL posting	6	7
6	CRM-401	CRM	Customer master management	6	5
7	PLAT-503	Foundation	Audit logging	5	9
8	SCM-302	SCM	Inventory receipt & stock update	5	5
9	FIN-103	Finance	Accounts Payable invoice entry	4	4
10	HCM-201	HCM	Employee master data	4	3
11	SCM-303	SCM	Purchase order creation	3	3
12	CRM-402	CRM	Sales quote generation	3	2
13	FIN-104	Finance	Multi-currency support	2	4
14	HCM-202	HCM	Leave management	2	2
15	NFR-601	Foundation	Performance optimization	1	8

Initial Sprint Allocation (Sprint 1-3):

Sprint	Stories	Focus
Sprint 1	PLAT-501, PLAT-502, FIN-101	Security foundation + Chart of Accounts
Sprint 2	SCM-301, FIN-102, PLAT-503	Product master + GL posting + Audit
Sprint 3	CRM-401, SCM-302	Customer master + Inventory basics

Backlog Refinement Cadence:

- Weekly backlog grooming session (90 minutes)
- Bi-weekly prioritization review with stakeholders
- Quarterly roadmap alignment
